Global Perspectives on Mentoring Feb 09 2021 This book will examine mentoring from a global perspective in an effort to discover the commonalities and differences, not only in diverse fields of practice, but across a wide range of contextual Place your subscription or standing order today! settings. Each chapter of the book will contain an overview of the program, problems encountered and solutions to them, benefits, outcomes, impact, and thoughts for reflection and consideration. The editor will examine common themes and explore their cross cultural implications. The volume is intended for those interested in the concept of mentoring in any professional setting and culture. It will provide important insights into how to create a mentoring program, strategies for overcoming problems, and methods for assessing outcomes and impact.

Surviving Year 12 Mar 13 2021 Each year, more and more emphasis is placed on achieving good results in the end-of-school exams. This can lead to students feeling extraordinary pressure and having unrealistic expectations. In this all-new and completely revised edition of the bestselling Surviving Year 12, Dr Michael Carr-Gregg, Australia's leading adolescent psychologist, gives advice to parents on how they can help their child cope with the pressure, work smarter and actually enjoy their final years of school. Includes advice on: The secrets of studying smarter (latest research) Overcoming anxiety and stress Getting enough sleep (the best study tool of all) Setting goals Dealing with procrastination Ensuring good exercise and diet regimes Coping with exams. Most importantly, Dr Carr-Gregg offers humorous encouragement to help maintain perspective and keep your sanity intact during this important year. With words of wisdom from past students and teachers, Surviving Year 12 is a must-have for parents of final-year students and their families.

Developing Language and Literacy in English across the Secondary School Curriculum Aug 25 2019 This book draws on original research and a language based pedagogy approach to examine how secondary schools in the UK can devise and implement coherent language and literacy across curriculum policies and strategies, so that grammar and associated metalanguage becomes an integral part of their day to day curriculum practices. The research was undertaken in three 11 to 18 secondary schools in England, where

the majority of students are categorised as having English as a second language (EAL), and where a significant minority are also socially disadvantaged in two of the three. The author argues that paying explicit attention to the linguistic structures through which subject knowledge is realised can be of benefit to all pupils in ways that are also socially just and democratic. This book provides an important bridge between academic theory and educational practice that will appeal to applied linguists and sociolinguists, as well as to teachers, teacher trainers and practitioners.

The Making of Geography as a Secondary School Subject May 03 2020 No work has ever been produced previously that shows how historically geography has been constructed as a subject for the senior years of secondary schooling in Western Australia from 1917 to 1997. In doing so, this book contributes to the existing corpus of international research on the history of curriculum and particularly the history of geography as a senior secondary school subject. Much of it is based on primary sources, including the textbooks and atlases used, along with syllabus manuals and geography examination papers. It also provides a framework for investigating the construction of senior secondary school geography curricula in other constituencies, and could act as a model for engaging in further research in curriculum history for other school subjects state-wide, nationally and internationally. The book also makes an important contribution to the fields of curriculum design, curriculum development and curriculum innovation. It will be of great interest to historians of education, comparative educationists, education leaders, policy makers and librarians.

VTAC eGuide 2016 Nov 01 2022 The VTAC eGuide is the Victorian Tertiary Admissions Centre's annual guide to application for tertiary study, scholarships and special consideration in Victoria, Australia. The eGuide contains course listings and selection criteria for over 1,700 courses at 62 institutions including universities, TAFE institutes and independent tertiary colleges.

WHO guideline on mass drug administration of azithromycin to children under five years of age to promote child survival Oct 27 2019 The purpose of the guideline was to provide an evidence-informed recommendation on whether mass drug administration of azithromycin, as a public health intervention for the reduction of under-five mortality, should (a) be rolled out universally in low- and middle-income countries, (b) be applied only in some situational contexts in low-and middle-income countries or (c) not be

used at all.

ABC of Applying Aug 30 2022 The ABC of Applying is a snapshot of the course, SEAS and scholarships application processes for prospective applicants including Year 12 students and their parents.

The Messages of Its Walls and Fields Jun 15 2021 *The Messages of its Walls and Fields* seeks to understand the culture of each decade of the School's development. The focus is on the boys themselves, but Katharine Thornton also evaluates the policies of succeeding Councils of Governors and the achievements of the thirteen Headmasters who have led Saints from 1847 to 2009. The curriculum story is here, the context for advocating sport, the emergence of the external activities of the co-curriculum, the values of a Saints' education, the background to each building project, the economy of the School, drama and the arts, science and new laboratories, the ambience of stone, trees and green lawn at the heart of a Saints' experience. St Peter's College graduates have made significant contributions to the life of South Australia, in the professions, in social values, in politics, in sport and in the arts. The history of South Australia must include a knowledge of this School. Here it is in twenty chapters and hundreds of illustrations, not just an entertainment for a week but a reliable record for a lifetime.

Research in Mathematics Education in Australasia 2008-2011 Apr 13 2021 This is the eighth edition of the four-yearly review of mathematics education research in Australasia. Commissioned by the Mathematics Education Research Group of Australasia (MERGA), this review critiques the most current Australasian research in mathematics education in the four years from 2008-2011. The main objective of this review is to celebrate and recognise significant findings; highlight relationships between research; identify themes; and forecast further research directions. This theme-based review has produced a

comprehensive analysis of Australasian research in a politically challenging time—producing a manuscript with implications for a wider, international, audience. As the 2009 Felix Klein medal winner Gilah Leder states: A substantial body of research is captured in the chapters of this review. It encompasses the labours of a community of active researchers, with varied interests and diverse theoretical perspectives. Some of the issues explored in the period covered by this volume clearly resonate with questions and concerns particularly pertinent to the changing educational environment; others are more aptly described as continuing or renewed explorations of areas of long standing concern.

Pseudoscience Oct 20 2021 In a post-truth, fake news world, we are particularly susceptible to the claims of pseudoscience. When emotions and opinions are more widely disseminated than scientific findings, and self-proclaimed experts get their expertise from Google, how can the average person distinguish real science from fake? This book examines pseudoscience from a variety of perspectives, through case studies, analysis, and personal accounts that show how to recognize pseudoscience, why it is so widely accepted, and how to advocate for real science. Contributors examine the basics of pseudoscience, including issues of cognitive bias; the costs of pseudoscience, with accounts of naturopathy and logical fallacies in the anti-vaccination movement; perceptions of scientific soundness; the mainstream presence of "integrative medicine," hypnosis, and parapsychology; and the use of case studies and new media in science advocacy.

Portugal Sep 26 2019 This Selected Issues paper examines the education system and public investment in Portugal. Both areas are generally considered as critical for Portugal's prospects for sustaining or accelerating the drive toward real income convergence. Moreover, both areas absorb a substantial share of public resources and thus have important implications for fiscal balances, which are, under European Monetary Union, constrained by the Stability and Growth Pact. The paper assesses the performance of the Portuguese education system and delineates a possible agenda for reform. It also attempts to shed light on the role of public investment in Portugal.

Understanding Student Participation and Choice in Science and Technology Education Oct 08 2020 Drawing on data generated by the EU's Interests and Recruitment in Science (IRIS) project, this volume examines the issue of young people's participation in science, technology, engineering and mathematics education. With an especial focus on female participation, the chapters offer analysis deploying varied theoretical frameworks, including sociology, social psychology and gender studies. The material also includes reviews of relevant research in science education and summaries of empirical data concerning student choices in STEM disciplines in five European countries. Featuring both quantitative and qualitative analyses, the book makes a substantial contribution to the developing theoretical agenda in

STEM education. It augments available empirical data and identifies strategies in policy-making that could lead to improved participation—and gender balance—in STEM disciplines. The majority of the chapter authors are IRIS project members, with additional chapters written by specially invited contributors. The book provides researchers and policy makers alike with a comprehensive and authoritative exploration of the core issues in STEM educational participation.
