Psychiatric and Mental Health Nursing Sep 26 2019 Psychiatric and Mental Health Nursing: Theory and practice was conceived as a result of three major premises which, in the view of the editors, relate to the practice of psychiatric and mental health nursing. First, that high-quality psychiatric and mental health nursing can be practised only if it is underpinned by appropriate nursing theory. Secondly, that there exists a body of theory which can and should

be applied to psychiatric and mental health nursing. Thirdly, that there is a need for a text which will assist teachers, students and clinicians to apply available nursing and borrowed theory to clinical practice. The general aim of this book is to introduce nursing students to a theory based approach to caring for people with psychiatric and mental health problems. The phrase psychiatric and mental health problems indicates that the text relates to clients with a psychiatric diagnosis, and also to those who have mental health problems but who do not necessarily have such a diagnosis. The client group to which the material in this text applies will include those who are, or have been, hospitalized and those in the community who have not been, and may never be, hospitalized. The intended readership is all students of psychiatric and mental health nursing issues, for example basic and post-basic nurses, and their teachers.

Yet recent research has demonstrated that many people afflicted with the disorder are able to recover to a significant degree. Living Outside Mental Illness demonstrates the importance of listening to what people diagnosed with schizophrenia themselves have to say about their struggle, and shows the dramatic effect this approach can have on clinical practice and social policy. It presents an in-depth investigation, based on a phenomenological perspective, of experiences of illness and recovery as illuminated by compelling first-person descriptions. This volume forcefully makes the case for the utility of qualitative methods in improving our understanding of the reasons for the success or failure of mental health services. The research has important clinical and policy implications, and will be of key interest to those in psychology and the helping professions as well as to people in recovery and their families.

Landmark Cases in Forensic Psychiatry Jun 03 2020 Forensic psychiatry (the interface of psychiatry and the law), forensic psychology, and mental health law are growing and evolving subspecialties in their respective larger disciplines. Topics included in these fields include a range as diverse as capital sentencing guidelines, informed consent, and standards of care for mental health treatment. All of these topics need to be understood and mastered by clinicians, educators, administrators and attorneys working with psychiatric patients. This book brings together concise, comprehensive summaries of the most important "landmark" legal decisions relating to mental health practice in the United States. These decisions, along with their underlying reasonings, make up a critical portion of the national certification examination for forensic psychiatry offered by the American Board of Psychiatry and Neurology (ABPN). Many of the themes are also tested in the ABPN certification examination for general psychiatry. This book is the first to provide a combination of summaries of the relevant legal content paired with board-style test questions designed to help consolidate knowledge and prepare for certification. Cases with similar themes are grouped together with an eye toward helping the reader understand the evolution of legal and clinical thinking on a particular topic. This book represents an important addition to the study tools and textbooks available related to psychiatry and the law and will serve as a useful reference for clinicians who must follow established legal requirements in their field.
