**From Underdogs to Tigers** Dec 17 2021 In 1980 the Indian software industry was practically non-existent. By the 1990s the industry was one of the largest employers in manufacturing. Similar patterns of growth can be found in other emerging economies. So given that the software industry is commonly viewed as a high-tech industry, how is it that such spectacular growth has occurred in countries where high-tech industries would not seem likely to develop? This book examines the reasons behind this phenomenon, and asks whether it suggests a new model of economic development. The contributors explore the implications of the rise of these newcomers to the software market for the global industry, and whether there are things to be learnt about the role of human capital in economic growth, firm formation and capabilities, business and managerial models, and industry structure. Chapters include country studies on Brazil, China, India, Ireland, and Israel, and are complemented by cross-cutting chapters on some of the key issues highlighted by the growth patterns of software in these nations, most notably the role of the multinational companies, the globalization of the skilled worker flows, and the formation of firm capabilities. The novelty of the growth patterns in the regions that studied makes this book useful for understanding analytical and empirical issues underlying new microfoundations of economic growth in some emerging regions of the world.

Following the publication of the successful first edition, and in response to many readers' positive feedback for its case studies, the second edition contains a large number of new mini case studies about innovative start-ups, businesses, and ideas in the period of 2007-12 Innovation Management shows how companies and individuals can transform creative ideas into powerful, sustainable, change-the-world businesses and emphasizes the crucial role of execution in implementing inspiring ideas.

*The Report: Nigeria 2016* Aug 01 2020 Nigeria is the largest economy in Africa with a GDP of \$ 487bn in 2015, according to the World Bank. The country asserted the mantle of the continent's largest economy in 2013, following a rebasing exercise. However, its large population means that Nigeria remains a comparatively poor country in per capita terms, with a lower GDP per capita than several of its sub-Saharan neighbors. Following a real GDP contract of 1.5% in 2016, the IMF forecasts that growth will reach 0.8% in 2017 and 1.9% in 2018. While growth began to pick up in the first half of 2017, Nigeria still has much work to do. However, there is the sentiment that the economy has turned a corner and has begun to see a silver lining. Devaluation of the naira, rising inflation, the drop in oil revenues, the slowdown in oil production, and the leader softening of growth,
