Automotive Interaction Design Mar 21 2022 This book focuses on the design of the in-car human-machine interface (HMI) and the design-relevant psychology. It combines a design perspective with an applied theoretical perspective. The design perspective informs the reader about how to set up a design process that puts users at the centre of the design process. The theoretical perspective provides the reader with an understanding of concepts from perception and cognitive psychology, supporting the decision-making in the design process. This is an ideal book for automotive engineers and practitioners in the automotive industry who face the challenge of designing information and entertainment systems, advanced driver assistance systems (ADAS) and automated driving systems (ADS), and the associated HMIs.

The Water Footprint Assessment Manual May 31 2020 People use lots of water for drinking, cooking and washing, but significantly more for producing things such as food, paper and cotton clothes. The water footprint is an indicator of water use that looks at both direct and indirect water use of a consumer or producer. Indirect use refers to the 'virtual water' embedded in tradable goods and commodities, such as cereals, sugar or cotton. The water footprint of an individual, community or business is defined as the total volume of freshwater that is used to produce the goods and services consumed by the individual or community or produced by the business. This book offers a complete and up-to-date overview of the global standard on water footprint assessment as developed by the Water Footprint Network. More specifically it:

- o Provides a comprehensive set of methods for water footprint assessment
- o Shows how water footprints can be calculated for individual processes and products, as well as for consumers, nations and businesses
- o Contains detailed worked examples of how to calculate green, blue and grey water footprints
- o Describes how to assess the sustainability of the aggregated water footprint within a river basin or the water footprint of a specific product
- o Includes an extensive library of possible measures that can contribute to water footprint reduction

Global Navigation Satellite System (Gnss) Manual Aug 26 2022

Draft SRA/RA Systems Design Manual Apr 22 2022 This manual has been written to support aid to navigation system design and maintenance functions performed at the District Office. In Section 1, the procedure presented applies the findings of the project to the specific problem of assigning priorities for the maintenance of individual aids when resources are limited. In Section 2, the procedure presented relates channel or harbor conditions to the aid to navigation systems needed to provide adequate performance. In Section 3, instructions and piloting performance data are provided for design methods which seek to 'manage' the risk of accidents. A second approach described is to design AN systems while considering the cost tradeoff between providing an aid to navigation system versus the value of the increased safety. A series of data collection efforts were conducted on shiphandling simulators and at sea specifically to derive design data for use in this manual. There were five visual simulator efforts, three radio aid simulator efforts, and two at-sea data collections. The draft manual is highly annotated with reference to these efforts.
