*Inside Graduate Admissions* Oct 27 2022 How does graduate admissions work? Who does the system work for, and who falls through its cracks? More people than ever seek graduate degrees, but little has been written about who gets in and why. Drawing on firsthand observations of admission committees and interviews with faculty in 10 top-ranked

doctoral programs in the humanities, social sciences, and natural sciences, education professor Julie Posselt pulls back the curtain on a process usually conducted in secret. "Politicians, judges, journalists, parents and prospective students subject the admissions policies of undergraduate colleges and professional schools to considerable scrutiny, with much public debate over appropriate criteria. But the

question of who gets into Ph.D. programs has by comparison escaped much discussion. That may change with the publication of *Inside Graduate Admissions*...While the departments reviewed in the book remain secret, the general process used by elite departments would now appear to be more open as a result of Posselt's book." —Scott Jaschik, *Inside Higher Ed* "Revealing...Provide[s] clear, consistent insights into what admissions committees look for." —Beryl Lieff Benderly, *Science*

**Florida Institute of Technology** Oct 03 2020 In the 1950s, East Central Florida underwent a vast transformation with the creation of the American space program. The sleepy fishing communities stretching from Titusville to Melbourne became home to an army of engineers, rocket scientists, and technicians who would soon take Florida and the nation into the missile age. With no opportunities for advanced study

nearby, a handful of determined men and women launched Brevard Engineering College in 1958. In 1966, Florida's secretary of state approved the college's petition to change its name to Florida Institute of Technology. In its short history, Florida Tech has overcome formidable hurdles and succeeded in winning a place in the top ranks of scientific and technological universities. A college on the rise, Florida Tech has not only a bright future, but a rich and colorful history that has been captured in striking photographs. The exciting story of "Countdown College"-from the lift-off of Bumper 8 in 1950, which launched the space program in Florida, to the most recent high-tech additions to campus facilities-is the subject of this captivating new pictorial history.

Artificial Intelligence in Design Oct 15 2021 Computers have been employed for some time in engineering design mainly as numerical or graphical tools to assist analysis and draughting. The advent of the technology of artificial intelligence and expert systems has enabled computers to be applied to less deterministic design tasks which require symbolic manipulation and reasoning, instead of only routine number processing. This book presents recent examples of such applications, focusing on mechanical and manufacturing design. The term 'design' is interpreted here in its wider sense to include creative activities such as planning. The book covers a wide spectrum of design operations ranging from component and product design through to process, tooling and systems design. Its aim is to expose researchers, engineers and

engineering designers to several developments in the emerging field of intelligent CAD and to alert them of the possibilities and opportunities in this exciting field.

**The Guide to Graduate Environmental Programs** Sep 02 2020 The Guide to Graduate Environmental Programs provides over 160 profiles of graduate programs across the country that offer curricula related to the environment. Because it was impossible to include every program in the book, and because these programs are constantly changing, Island Press welcomes suggested changes and additions to the profiles. While Island Press is not the official "author" of the book, we are eager to receive new or updated information to be included in the next edition. Drawing from this information, Island Press has created an online listing of programs that were not profiled in the book. To submit your contribution, either fill out the postcard included in the book itself, or e-mail the name, address, phone number, and e-mail address of the "contact person" for that program; someone will contact that person for further information as the second edition is developed. If you would like to correct an error or to

provide specific "update" information, please e-mail that information or return the card included in the book. Following is a description of how the book was researched and the profiles compiled: The research process began with a list, drawn up by career center staff at University of California at Santa Barbara, of 412 environmental programs, departments, and schools within universities across the country. The list was based on a literature search, queries over the Internet, and contact with environmental professionals and associations. Certificate-only programs were not included. Selection preference was given to programs mentioned repeatedly by environmental professionals, and to those drawing a more diverse student body. Postcards requesting information and course catalogues were sent to all 412 programs. A survey was mailed to faculty representing each program. Of the 412 graduate programs queried, 156 programs completed and returned their surveys. Each completed survey was reworked into a profile. Schools that did not respond to the mailing were contacted twice by phone to remind them to return the survey. To supplement this information, and to ensure that the most noteworthy programs were included in the guide, additional profiles were compiled for a select number of key programs that failed to return their surveys. These latter profiles were based on literature review and personal interviews. In all, each program was contacted three times - once by mail and twice by phone - to encourage them to submit their surveys, and to verify and update information. The absence of a particular profile, or segment of a profile, reflects no editorial judgement on the part of the authors. Rather, if a specific program was not profiled, the most likely explanation is that the program in question did not return its survey. If you have information on other graduate environmental programs, please pass that information on to us, so that we can include them in future editions of the guide. Most of the information provided was accurate as of November 1994 - the date by which the surveys were completed - and some follow-up verification was conducted during the summer of 1996, before the book went into production. There are an ever-expanding number of programs in the environmental field, and existing programs are constantly evolving. Readers should therefore

expect to continue to encounter ongoing changes in names, titles, and phone numbers.

Good Grad! Sep 26 2022 A graduate student in the sciences and engineering has to attend conferences, write journal articles, navigate collaborations, negotiate for lab equipment, mediate between squabbling lab mates, indulge eccentric professors, teach undergraduates, and secure funding every semester. Undergrad teaches you none of these skills, and no one warns you before you start grad school that you need them. "Good Grad " is a practical-and politically incorrect-guide for current and future grad students trying to unravel the mysteries of the master's degree and Ph.D. For most of your time in grad school, you're not worrying about looking good to an admissions committee or beefing

up a resume. Instead, you're hoping that you'll get that teaching position next semester so you can pay the rent; you're working late into the night to get that conference abstract submitted before the deadline; you're wondering how to get forms signed when your advisor is out of town; you're hoping you won't have to spend the weekend feeding rats in the lab. "Good Grad " contains the hard-fought wisdom of those who have gone through these trials by fire and come out the other side. For budding scientists and engineers, "Good Grad " is an indispensable resource at every stage of a graduate career, from when you're deciding whether to attend grad school at all to when you're finally defending your thesis, and all the years in between. Table of Contents: Introduction Chapter 1: Going to Grad School Chapter 2: The Milestones of Grad School Chapter 3: Your Advisor Chapter 4: The Research Group Chapter 5: Your Research Chapter 6: Funding Chapter 7: Going to a Conference Chapter 8: Publishing a Journal Article Chapter 9: The Bureaucracy Chapter 10: Getting a Job Epilogue: Social Life

Ishtyle Aug 25 2022 Ishtyle follows queer South Asian men across borders into gay neighborhoods, nightclubs, bars, and house parties in Bangalore and Chicago. Bringing the cultural practices they are most familiar with into these spaces, these men accent the aesthetics of nightlife cultures through performance. Kareem Khubchandani develops the notion of "ishtyle" to name this accented style, while also showing how brown bodies inadvertently become accents themselves, ornamental inclusions in the racialized grammar of desire. Ishtyle allows us to reimagine a global class perpetually represented as docile and desexualized workers caught in the web of global capitalism. The book highlights a different kind of labor, the embodied work these men do to feel queer and sexy together. Engaging major themes in queer studies, Khubchandani explains how his interlocutors' performances stage relationships between: colonial law and public sexuality; film divas and queer fans; and race, caste, and desire. Ultimately, the book demonstrates that the unlikely site of nightlife can be a productive venue for the study of global politics and its institutional hierarchies.

**The Complete Guide to Graduate School Admission** Jul 12 2021

Should I go to graduate school? How do I choose where to apply? Are my grades and accomplishments good enough to get in? Who should I ask to write recommendation letters for me, and how should I approach these people? How do I write my "personal statement?" When will I hear my fate, and how should I make my final decision? These are just a few of the many questions to which this well-researched, thorough, and extremely user-friendly book offers answers. Students who are contemplating graduate training in psychology, counseling, and related fields are often apprehensive and confused about applying to graduate school, but this book takes the guesswork and anxiety out of the process. The tone and features (such as the Q&A format, timeline for application-related tasks and activities, and special advice for special populations) that made the first edition so successful, eliciting hundreds of thank-you notes and e-mail messages to the author, are just as evident in this new edition. The book has been thoroughly updated to include coverage of new topics such as use of the internet and e-mail, as well as changing trends in the professions. The most obvious difference is that the book is now significantly shorter as a result of meticulous rewriting, making it even easier to use. There have been attempts since the publication of the first edition to copy the format of this book, but none of the others have successfully duplicated the depth of research-based advice and the supportive style that make this book the guide of choice for thousands of graduate-school bound students and their advisors.
