Training for On-board Bus Electronics Nov 16 2021 The purpose is to document training practices at a sampling of transit agencies concerning the application and repair of advanced on-board electronics so that key personnel have the knowledge needed to make informed decisions. The objectives of the synthesis were to examine the level of E/E training being provided by transit agencies to highlight innovative and effective training approaches and, based on findings from the conclusions, to provide agencies with the opportunity to improve their training programs. Because maintenance is an area that is often overlooked, this synthesis gives it the greatest focus.

An Evaluation of the Effect of Level of Service and Cost on Demand for Intercity Bus Travel Mar 08 2021 This report describes an evaluation of the effect on intercity bus ridership of changes in frequency of service and cost. The study was based on a comparison of travel between 19 selected cities in Virginia served by air, bus, or rail. These modes were compared with highway travel by auto using various assumptions of energy availability. The effect of increasing the frequency of bus service was also investigated to determine if it is a viable means for attracting additional travel demands. Network data for each mode consisted of travel time, cost, and frequency of service. These data were applied to three state-of-the-art intercity travel demand models selected from eleven reported in the literature. A status quo demand estimate was produced for travel within the Virginia system and the results were compared with demand resulting from increasing the number of bus departures per day and increasing per mile auto costs. The effect of increases in bus fare due to rising fuel costs was also determined. The results of this investigation indicate that intercity bus travel demand will not be significantly altered with increases in the number of bus departures per day, but will increase as costs of auto fuel rise. The intercity demand model developed by the state of Michigan yielded the most consistent results of all models tested.

Understanding Mobility as a Service (MaaS) Oct 23 2019 The widespread adoption of smartphones, ridesharing and carsharing have disrupted the transport sector. In cities around the world, new mobility services are both welcomed and challenged by regulators and incumbent operators. Mobility as a Service (MaaS), an ecosystem designed to deliver collaborative and connected mobility services in a society increasingly embracing a sharing culture, is at the center of this disruption. Understanding Mobility as a Service (MaaS): Past, Present and Future examines such topics as: How likely MaaS will be implemented in one digital platform app Whether MaaS will look the same in all countries The role multi-modal contract brokers play Mobility regulations and pricing models MaaS trials, their impacts and consequences Written by the leading thinkers in the field for researchers, practitioners, and policy makers, Understanding Mobility as a Service (MaaS): Past, Present and Future serves as a single source on all the current and evolving developments, debates, and challenges. Includes case studies to show how MaaS is delivered around the world Covers foundational aspects of MaaS, clarifying what it is for those new to the concept Offers an in-depth analysis on a wide range of MaaS topics including governance, contracts, consumer and supplier preferences, links to societal objectives, the role of trials, assessments, and more

Guidebook for Mitigating Fixed-route Bus-and-pedestrian Collisions Dec 25 2019 TRB's Transit Cooperative Research Program (TCRP) Report 125: Guidebook for Mitigating Fixed-Route Bus-and-Pedestrian Collisions is designed to help assist small, medium, and large transit agencies and their community members in identifying preventative or remedial strategies for reducing the frequency and severity of bus-and-pedestrian collisions. The report explores strategies to mitigate collisions, includes case studies on the implementation of mitigating strategies, and highlights important considerations associated with improving pedestrian safety around transit buses.

Productivity, Cost Structure, and Pricing in Urban Bus Transport Jan 06 2021 Cities play a vital role in economic growth and prosperity. Sustainable development of cities largely depends upon their physical, social and institutional infrastructure. In this context, the importance of transportation system is paramount. Urban transportation is probably the single most important component instrumental in shaping urban development and urban living. While urban areas may be viewed as engines of growth, urban transport is, figuratively and literally, the wheel of that engine. As cities expand to the point where walking can no longer satisfy the mobility requirements of the people, public transport becomes the major mode of transportation. Until recently the main function of public transport was to satisfy the individual needs of the less affluent members of the society. Now, it is required to attract all segments of the society to provide congestion relief and environmental preservation. Productivity improvement and efficiency in the public transport system must be concerned not only with keeping costs down, but also with providing a flexible framework within which all income groups can use public transport with confidence and convenience.

Hearings, Reports and Prints of the House Committee on Public Works Dec 05 2020

Practices to Protect Bus Operators from Passenger Assault May 22 2022 "TRB's Transit Cooperative Research Program (TCRP) Synthesis 93: Practices to Protect Bus Operators from Passenger Assault highlights practices and policies implemented by transit agencies to deter and mitigate assaults on bus operators"--Publisher's description.

The Future of Disability in America Jun 23 2022 The future of disability in America will depend on how well the U.S. prepares for and manages the demographic, fiscal, and technological developments that will unfold during the next two to three decades. Building upon two prior studies from the Institute of Medicine (the 1991 Institute of Medicine's report Disability in America and the 1997 report Enabling America), The Future of Disability in America examines both progress and concerns about continuing barriers that limit the independence, productivity, and participation in community life of people with disabilities. This book offers a comprehensive look at a wide range of issues, including the prevalence of disability across the lifespan; disability trends the role of assistive technology; barriers posed by health care and other facilities with inaccessible buildings, equipment, and information formats; the needs of young people moving from pediatric to adult health care and of adults experiencing premature aging and secondary health problems; selected issues in health care financing (e.g., risk adjusting payments to health plans, coverage of assistive technology); and the organizing and financing of disability-related research. The Future of Disability in America is an assessment of both principles and scientific evidence for disability policies and services. This book's recommendations propose steps to eliminate barriers and strengthen the evidence base for future public and private actions to reduce the impact of disability on individuals, families, and society.

Bus Use of Shoulders Aug 21 2019 "TRB's Transit Cooperative Research Program (TCRP) Synthesis 64: Bus Use of Shoulders explores transit agencies' experiences with policies and regulations that permit buses to use shoulders on arterial roads or freeways to bypass congestion either as interim or long-term treatments. The report examines the issue from the transit and highway perspectives"--Publisher's description.

Effective Approaches to Meeting Rural Intercity Bus Transportation Needs Mar 28 2020 This report presents results of research conducted under Transit Cooperative Research Program (TCRP) Project B-21, "Effective Approaches to Meeting Rural Intercity Bus Transportation Needs." The project identified strategies for initiating, preserving, and enhancing effective rural intercity bus transportation. To identify recent projects and to identify barriers or issues affecting implementation, the research effort included surveys of state rural transit program managers, state rail program managers, and intercity bus carriers. The report includes three parts. Part I contains a review of recent developments affecting the intercity bus industry, an overview of potential funding sources, and a review of barriers to implementation of rural intercity projects. Part II provides strategies for rural intercity service improvements, including methods of identifying intercity carriers and services, planning, program development, operating assistance, capital assistance, marketing assistance, and combining approaches. Each strategy is described, and implementation examples are presented. Part III presents 50 project descriptions based on additional survey interviews with project contacts.
