Innovation and Industrial Development in China Feb 11 2021 This book focuses on China's economic transformation at firm and institution levels. It shares insights into the growth of innovative Chinese firms in the automobile and telecom equipment sectors, both of which promoted social dialogue of policy-making and ultimately contributed to a policy paradigm shift in China's 'indigenous innovation'. The book illustrates, through case studies on firms like Geely, the Chery, the BYD, Huawei, the ZTE and the DTT, how these firms behave differently from other local actors and what social conditions had contributed to their success. The book will help those who are interested to learn more about the rise of innovative Chinese firms to better understand the dynamics of China's industrial progress.

Bangers May 17 2021 A teenage lad's fascination with old cars. An even greater fascination with teenage girls. A sad lack of sufficient funds to pursue either interest with much credibility. A conundrum which has challenged car-obsessed male youth the world over since the fateful day in 1885 when Gottlieb Daimler's spindly-wheeled creation pattered out of its shed for the first time. Bangers relates how one impoverished would-be Lothario tackled these issues during the late 60s and early 70s. Successes were rare, disasters were commonplace but the adventures on the journey were entertaining and fulfilling - most of the time. An affectionate look back at a less constrained, less self-conscious era, Bangers tells the story of a young man fumbling his way towards adulthood through tales of the many old cars that found their way into his life. Each of these crumbling wrecks moved him a fraction further down the path of enlightenment in his attempts to comprehend basic mechanics and female temperament - not that he ever got much beyond scratching the surface of either concept. In fact, 50 odd years and 70 odd cars later, he remains as bemused by it all as he ever was. However, two constants have remained with him throughout. One is the knowledge that he was always far from being alone in his obsession with old motors as a quick glance at the magazine shelves in any newsagent will confirm. The other is that someone, somewhere really ought to try and explain all this to the opposite sex.

Injection Technologies and Mixture Formation Strategies For Spark Ignition and Dual-Fuel Engines Apr 27 2022 Fuel injection systems and performance is fundamental to combustion engine performance in terms of power, noise, efficiency, and exhaust emissions. There is a move toward electric vehicles (EVs) to reduce carbon emissions, but this is unlikely to be a rapid transition, in part due to EV batteries: their size, cost, longevity, and charging capabilities as well as the scarcity of materials to produce them. Until these issues are resolved, refining the spark-ignited engine is necessary address both sustainability and demand for affordable and reliable mobility. Even under policies oriented to smart sustainable mobility, spark-ignited engines remain strategic, because they can be applied to hybridized EVs or can be fueled with gasoline blended with bioethanol or bio-butanol to drastically reduce particulate matter emissions of direct injection engines in addition to lower CO2 emissions. In this book, Alessandro Ferrari and Pietro Pizzo provide a full review of spark-ignited engine fuel injection systems. The most popular typologies of fuel injection systems are considered, with special focus on state-of-the-art solutions. Dedicated sections on the methods for air mass evaluation, fuel delivery low-pressure modules, and the specific subsystems for idle, cold start, and warm-up control are also included. The authors pay special attention to mixture formation strategies, as they are a fundamental theme for SI engines. An exhaustive overview of fuel injection technologies is provided, and mixture formation strategies for spark ignited combustion engines are considered. Fuel Injection Systems illustrates the performance of these systems and will also serve as a reference for engineers who are active in the aftermarket, offering detailed information on fuel injection system solutions that are mounted in older vehicles.
