The Darwin Expedition Jan 30 2020 Tej and Liam are going snowboarding. When they take a shortcut over a treacherous logging road and have an accident, their adventure becomes more about survival than fresh powder. Tracked by a hungry bear, while trying to outrun the weather without any food, Tej and Liam learn about their friendship and what it will take to survive. When Tej is hurt, Liam decides he has to go for help—alone.

The Third Pole Aug 26 2019 ***NPR Books We Love selection*** “If you’re only going to read one Everest book this decade, make it *The Third Pole*. . . . A riveting adventure.”—Outside Shivering, exhausted, gasping for oxygen, beyond doubt . . . A hundred-year mystery lured veteran climber Mark Synnott into an unlikely expedition up Mount Everest during the spring 2019 season that came to be known as “the Year Everest Broke.” What he found was a gripping human story of impassioned characters from around the globe and a mountain that will consume your soul—and your life—if you let it. The mystery? On June 8, 1924, George Mallory and Sandy Irvine set out to stand on the roof of the world, where no one had stood before. They were last seen eight hundred feet shy of Everest’s summit still “going strong” for the top. Could they have succeeded decades before Sir Edmund Hillary and Tenzing Norgay? Irvine is believed to have carried a Kodak camera with him to record their attempt, but it, along with his body, had never been found. Did the frozen film in that camera have a photograph of Mallory and Irvine on the summit before they disappeared into the clouds, never to be seen again? Kodak says the film might still be viable. . . . Mark Synnott made his own ascent up the infamous North Face along with his friend Renan Ozturk, a filmmaker using drones higher than any had previously flown. Readers witness first-hand how Synnott’s quest led him from oxygen-deprivation training to archives and museums in England, to Kathmandu, the Tibetan high plateau, and up the North Face into a massive storm. The infamous traffic jams of climbers at the very summit immediately resulted in tragic deaths. Sherpas revolted. Chinese officials turned on Synnott’s team. An Indian woman miraculously crawled her way to frostbitten survival. Synnott himself went off the safety rope—one slip and no one would have been able to save him—committed to solving the mystery. Eleven climbers died on Everest that season, all of them mesmerized by an irresistible magic. *The Third Pole* is a rapidly accelerating

ride to the limitless joy and horror of human obsession.

Lewis and Clark Jul 06 2020 William Lighton presents a history of the Lewis and Clark expedition. It is a brief account and overview written in 1901.

Science in an Extreme Environment Mar 02 2020 On February 20, 1963, a team of nineteen Americans embarked on the first expedition that would combine high-altitude climbing with scientific research. The primary objective of the six scientists on the team—who procured funding by appealing to the military and political applications of their work—was to study how severe stress at high altitudes affected human behavior. The expedition would land the first American on the summit of Mount Everest nearly three years after a successful (though widely disputed) Chinese ascent. At the height of the Cold War, this struggle for the Himalaya turned Everest into both a contested political space and a remote, unpredictable laboratory. The US expedition promised to resurrect American heroism, embodied in a show of physical strength and skill that, when combined with scientific expertise, would dominate international rivals on the frontiers of territorial exploration. It propelled mountaineers, scientists, and their test subjects 29,029 feet above sea level, the highest point of Chinese-occupied Tibet. There they faced hostile conditions that challenged and ultimately compromised standard research protocols, yielding results that were too exceptional to be generalized to other environments. With this book, Philip W. Clements offers a nuanced exploration of the impact of extremity on the production of scientific knowledge and the role of masculinity and nationalism in scientific inquiry.

FLIGHT, CAMERA, ACTION! The History of U.S. Naval Aviation Photography and Photo-Reconnaissance Feb 10 2021 The first U.S. Navy aerial photographs were taken in 1913 in support of fleet exercises off Guantanamo, Cuba. Following WWI, a Navy Photographic expedition went north, making the first aerial mapping photos of the Alaskan territory. WWII found Navy shuttermen in

the Pacific theatre, performing pre- and post-attack reconnaissance, along with "hitting the beach" to record the war as it unfolded. Shortly after, Navy photographic units were in the Pacific to record early atomic bomb tests. The Navy's aerial photo reconnaissance mission, both at the front end with the weaponless aircrews and the output of thousands of images and photo interpretation, continued to develop through the mid-20th century. The last aerial photo plane in the Navy's inventory was retired after flying to the Smithsonian's Air and Space Museum Annex at Dulles International Airport in Fairfax County, Virginia. The 74 year odyssey of Navy and Marine Corps aerial reconnaissance photography was finished.

Labyrinth of Ice Apr 02 2020 National Outdoor Book Awards Winner Winner of the BANFF Adventure Travel Award “A thrilling and harrowing story. If it’s a cliché to say I couldn’t put this book down, well, too bad: I couldn’t put this book down.” —Jess Walter, bestselling author of *Beautiful Ruins* “Polar exploration is utter madness. It is the insistence of life where life shouldn’t exist. And so, *Labyrinth of Ice* shows you exactly what happens when the unstoppable meets the unmovable. Buddy Levy outdoes himself here. The details and story are magnificent.” —Brad Meltzer, bestselling author of *The First Conspiracy: The Secret Plot to Kill George Washington* Based on the author's exhaustive research, the incredible true story of the Greely Expedition, one of the most harrowing

adventures in the annals of polar exploration. In July 1881, Lt. A.W. Greely and his crew of 24 scientists and explorers were bound for the last region unmarked on global maps. Their goal: Farthest North. What would follow was one of the most extraordinary and terrible voyages ever made. Greely and his men confronted every possible challenge—vicious wolves, sub-zero temperatures, and months of total darkness—as they set about exploring one of the most remote, unrelenting environments on the planet. In May 1882, they broke the 300-year-old record, and returned to camp to eagerly await the resupply ship scheduled to return at the end of the year. Only nothing came. 250 miles south, a wall of ice prevented any rescue from reaching them. Provisions thinned and a second winter descended. Back home, Greely's wife worked tirelessly against government resistance to rally a rescue mission. Months passed, and Greely made a drastic choice: he and his men loaded the remaining provisions and tools onto their five small boats, and pushed off into the treacherous waters. After just two weeks, dangerous floes surrounded them. Now new dangers awaited: insanity, threats of mutiny, and cannibalism. As food dwindled and the men weakened, Greely's expedition clung desperately to life. *Labyrinth of Ice* tells the true story of the heroic lives and deaths of these voyagers hell-bent on fame and fortune—at any cost—and how their journey changed the world.

The Expedition of the Donner Party and Its Tragic Fate Mar 26 2022 George and Tamsen Donner and their children, among the very first to leave from Illinois, joined emigrants headed to California in the spring of 1846. Beyond Fort Bridger, Captain Donner led a large party through a much-advertised shortcut. Delays and difficulties caused them to be snowbound in the High Sierras, facing the grim specter of starvation and extreme suffering. Though only four years old at the time of the expedition, the captain's youngest daughter, Eliza Donner, would never forget the excitement of crossing the prairies—or the horror of that winter. Details impressed on her young mind were later substantiated by the recollections of her older sisters and other survivors. Her book, originally published in 1911, is an intimate and authoritative account of the Donner disaster. George and Tamsen Donner and those who shared their fate are fully humanized in the telling. Eliza also relates what happened to her and a sister after being rescued and what it was like to grow up in a world that turned the Donners into a grisly legend.

Mount Everest - Only the Sky Above Jul 26 2019 ONLY THE SKY ABOVE Mount Everest, 29,028 feet—on May 27th, 1999, Helga Hengge reaches the top of the world, the highpoint of an exciting career between the extremes of creative work and outstanding mountaineering achievement. In her inspiring account she takes her readers on an adventure through Tibet and up to the summit of Mount Everest with emotional and authentic insights into the dynamics of tackling the ultimate challenge. Accompanied by spectacular

images of her two-month long ascent via the Northeast Ridge in Tibet she shares her story of pushing physical and emotional boundaries in the face of challenge. She talks about the step-by-step ascent, the power of a team, dealing with setbacks, and about trusting your inner strength. The highlight of her account is the ascent to the summit and the fulfillment of a great dream. The moment, when there is only the sky above. Helga Hengge, who has dual citizenship, was the first German woman to successfully summit Everest and the first American woman to do so from the North side.

Exploring the Legacy of the 1948 Arnhem Land Expedition Dec 23 2021 "In 1948 a collection of scientists, anthropologists and photographers journeyed to northern Australia for a seven-month tour of research and discovery - now regarded as 'the last of the big expeditions'. The American-Australian Scientific Expedition to Arnhem Land was front-page news at the time, but 60 years later it is virtually unknown. This lapse into obscurity was due partly to the fraught politics of Australian anthropology and animus towards its leader, the Adelaide-based writer-photographer Charles Mountford. Promoted as a 'friendly mission that would foster good relations between Australia and its most powerful wartime ally, the Expedition was sponsored by National Geographic, the Smithsonian Institution and the Australian Government. An unlikely cocktail of science, diplomacy and popular geography, the Arnhem Land Expedition put the Aboriginal cultures of the vast Arnhem Land reserve on an international stage." -- Publisher's website.
